Technical Writing Portfolio

As a Frontend Developer, Software Technical Writer, and AI-native practitioner at Ritza, I develop full-stack applications, build production AI workflows, and create comprehensive technical documentation for industry-leading technology companies.

I work daily with agentic systems, multi-agent patterns, RAG pipelines, and automation tools, using Claude Code as my primary development environment.

This hands-on experience producing real software alongside the documentation that explains it ensures authentic, code-backed content that drives user adoption and consistently achieves top search rankings.

Recent Achievement: My AI/ML tutorial was featured on the front page of Hacker News, generating over 1.5k page visits and demonstrating the impact of combining practical development work with high-quality technical content.

Letta *AI agent memory platform (stateful, long-term memory agents)*

INTEGRATION TUTORIALS

- Build a Multi-User Chatbot with Letta, Supabase, and Next.js
- Full Stack Letta and Supabase Integration

MULTI-AGENT PATTERN GUIDES

- The supervisor-worker pattern
- The parallel execution pattern
- The producer-reviewer pattern
- The round-robin pattern
- The hierarchical teams pattern
- The consensus voting pattern Not yet published
- The handoff pattern Not yet published
- The mesh pattern Not yet published
- The debate pattern Not yet published

TUTORIALS

- RAG with Letta
- Connecting Zapier and Letta
- Connecting n8n and Letta
- Building a customer success CRM with the Letta API
- Connect your custom RAG pipeline to a Letta agent
- Integrating external memory storage with Letta
- Letta Bot Quickstart and feature showcase Not yet published

FEATURE DOCUMENTATION

- Client tools
- MCP servers Not yet published
- MemFS Not yet published
- Search Not yet published
- Background subagents Not yet published

SDK MIGRATION & AUDITS

- SDK 1.0 documentation audit and update
  - Full audit and rewrite of docs for SDK 1.0 release

Tech Stackups *Ritza's own site - developer tool comparisons and AI guides*

AX AUDITS

- DocuSign for AI Agents: What Actually Works in 2026
- Freestyle.sh for AI Agents: An AX Audit

COMPARISONS

- Browser Use vs Claude Computer Use: DOM vs Vision
- Agent Experience Guide: Transcription APIs - OpenAI vs Groq vs Mistral
- Agent Experience for Browser Automation: Browserless vs Browserbase vs Anchor
- Browserbase vs Kernel: Cloud Browser Automation for AI Agents
- Replit vs Amp: What $20 Gets You
- Benchmarking Hosted Browser Providers: Speed, Stealth, CAPTCHA, and Concurrency

GUIDES

- Build an AI Email Assistant with Letta, n8n, and Resend

Bryntum *Scheduling and project management UI component library*

INTEGRATION TUTORIALS

- How to use Supabase Edge Functions to build a Bryntum Gantt chart with React
- How to connect and sync Bryntum Scheduler to Microsoft Teams
- How to visualize your Google Sheets data with Bryntum Gantt
- How to connect and sync Bryntum Task Board to Jira
- How to connect and sync Bryntum Calendar to a Microsoft Outlook Calendar
- How to connect and sync Bryntum Scheduler Pro to monday.com
- Creating a custom Bryntum Gantt React component for Storyblok

SOFTWARE PROJECT TUTORIALS

- Build a location-based scheduler with Mapbox using Bryntum
- Create a property management scheduler with Bryntum using vanilla JavaScript

MIGRATION TUTORIALS

- How to connect and sync Bryntum Calendar to a Microsoft Outlook Calendar
- Migrating from DHTMLX Gantt to Bryntum Gantt

Sourcegraph *Code intelligence and developer productivity platform*

TECHNICAL ARTICLES

- Revisiting the design approach to the Zig programming language
  - Featured on the front page of Hacker News
- Code Search at Google: The Story of Han-Wen and Zoekt
- Git vs. Perforce - how Salesforce Engineering helped Sourcegraph scale to one of the largest monorepos
- "Shift left" - wtf does it mean?

Code Capsules *South African cloud hosting platform for developers*

SOFTWARE PROJECT TUTORIALS

- Building a Full Stack Application With Express and HTMx
  - Top result when searching for HTMx and Express tutorials
- Building a "Reader Mode" Full Stack Application With Flask and Redis
- Build an Imgur Clone With Uppy and Caddy
- Building a Full Stack Application With Flask and HTMx
- White-Label Your App With Code Capsules
- Building a Book Recommendations App With PHP, SQLite, and Docker
- Host Your Front-End Developer Portfolio

TECHNICAL DOCUMENTATION

- Set Up a MySQL Data Capsule
- Set Up a MongoDB Data Capsule
- Set Up a Redis Data Capsule

Replit *Browser-based IDE and collaborative coding platform*

TECHNICAL DOCUMENTATION

- Replit Key-Value Store

Release *Ephemeral environment platform for software teams*

TECHNICAL DOCUMENTATION

- How to set Docker Compose Environment Variables

Cerebrium *Serverless ML inference platform*

TECHNICAL ARTICLES

- Migrate from OpenAI to Cerebrium with vLLM for Predictable Inference
  - Featured on Hacker News front page, 1.5k+ page visits

Sentry *Application monitoring and error tracking platform*

TECHNICAL ARTICLES

- Smarter Debugging with Sentry MCP for Cursor
